Separate Feeding for Males and Females !!

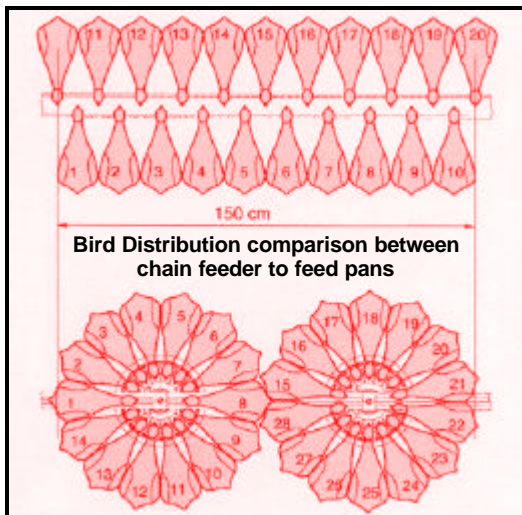

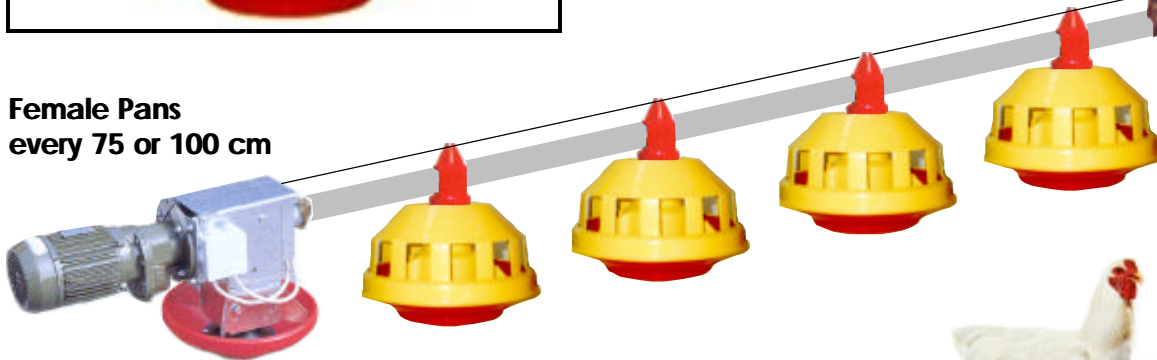

Female Feeding:

Feed pan is provided with male restrictor grill with 14 holes.
45 x 70 mm fixed window opening.
Males cannot eat inside feed pan.
High speed feeder: 3/4" HP - 540 rpm.
Also available electric winch with limit switch to raise feeder up and down, during feeding time.

Female Pans
every 75 or 100 cm

Bird Distribution:

The Circular gathering of hens around feeding pans, means against gathering of hens in chain feeder, a 30% more of hens per lineal meter in the feeding line installation.

Male Pans
every 150 or 300 cm

Choice of Feed Cones

Short or Long Cones to reduce feed capacity in feed pan.

Male Separate Feeding :

Male feeder is raised more higher than female feeder, then females cannot eat into cockerel pans. Cockerel pans are fixed into feed pipe, to prevent pan free swinging. High speed feeder: 3/4" HP - 540 rpm.
